Varta's Lithium Flat Cell Voted Product of the Year 1999

Readers of the "Elektronik" magazine recently voted the lithium flat cell from Varta the "Product of the Year 1999". The paper-thin energy storage system was way out in front in the power supply category.

The editors of "Elektronik", a specialist magazine for industrial users and developers, put 111 products in different categories up for selection. Readers were invited to choose from these products the ones which they regarded as particularly innovative, interesting or future-oriented. Many opted for the lithium flat cell from Varta. This extremely thin power store is only 0.4 mm thick and is used primarily in smart cards. The battery provides 3 volts and lasts up to three years under normal use. It is also well suited for applications requiring very low installation heights.
