1.4 Selection Guide ................................................................................... 10
The VARTA Microbattery lithium manganese dioxide cell chemistry was one of the first solid cathode cells commercially developed and is still the most widely used system today. These cells offer an excellent shelf life, good high-rate and low-rate capability, a wide operating temperature range and availability in button and cylindrical cell designs. Potential design-in applications for these products are electronic, telecommunication, metering, instrumentation, office and other portable equipment use. Based on the outstanding cell performance and reliability of these products, they have been able to meet and exceed the requirements of our customer base worldwide.

Advantages for VARTA Microbattery LiMnO₂ Cells

- High open circuit and load voltage (above 3.0 volts per cell)
- High energy density (400 Wh/kg and 600 Wh/l)
- High capacity and high rate cell construction
- Operation over a wide temperature range
- Flat discharge profile under low to medium rate applications
- Low self discharge (less than 1% per year at RT)
- Superior shelf life and operational life (Up to 10 years and more)
- UL Recognition
- Ability to provide a variety of laser welded termination tabs for all cell types

Energy Density for Primary Systems

Comparison of different primary battery systems

A = Lithium  
B = Silver-oxide  
C = Alkaline  
D = Zinc-chloride
VARTA Microbattery offers a complete range of primary lithium manganese dioxide cylindrical and button cells for memory backup and portable applications worldwide. The cylindrical cell configurations offer the high-capacity bobbin construction and high-power spirally wound product. The bobbin construction is targeted at low to moderate power requirements, dedicated for applications requiring up to a 10 years operational life at 20°C. Our spirally wound electrode product offers high-rate discharge capability, with an operational life in excess of 5 years. For compact and lightweight equipment use we have a complete range of high performance primary lithium button cells.

1.2 CHARACTERISTICS AND APPLICATIONS

Main Applications

Both mechanical and electrical properties, together with reliability, ensure that VARTA Microbattery lithium batteries meet the requirements of modern electronics. They are therefore ideally suited as power sources for the long term supply of microelectronic circuitry.

Main Characteristics

- Long life expectancy and long operational life
- Low self discharge rate
- High energy density
- High cell voltage (3 V)
- Wide temperature range

- High operating safety
- High reliability
- Resistance to corrosion with stainless steel case
- No leakage problems with an organic non-corrosive electrolyte

Temperature characteristics

Temperature characteristics of CR 1/2 AA and CR AA cylindrical cells
(Load: 5.6 kΩ CR AA, 12 kΩ CR 1/2 AA)

A = -40°C
B = +80°C
C = +60°C
D = -20°C
E = +23°C

1.3 APPLICATIONS

Utility Meters

Electricity Meters, Gas Meters, Water Meters, Calorimeters, Automatic Meter Reading (AMR), Heat Cost Allocator.

Safety/Security Systems

Automotive Electronics

Asset Tracking

Automation

Memory back-up, Intelligent Interfaces, Personal Computers, Intelligent Typewriters, Address Printers, Envelopment Franking Machines, Cash Points, Scales, Copy Machines, Cash Register.

Vending Machines

Ticket Vending Machines, Newspaper Vending Machines, Cigarette Vending Machines, Sweet Vending Machines, Drink Vending Machines, Parking Meter.

High End Consumer

Audio and Video Memory back-up and RTC, Video Games, Gambling Machines, SCUBA Diving Meters, Altimeters, Marine Electronics, Ski Bindings, Portable Timing Units for sports events, Pigeon Flight Time Recorders.

Industrial/Medical Instrumentation

1.4 SELECTION GUIDE

To enable battery selection the following is required:

- Discharge current and maximum discharge time  
  - capacity
- Operating temperature range  
  - self discharge  
  - surplus capacity requirement
- Cell size

CAPACITY RETENTION

Material: nickel plated sheet-steel, tag thickness: 0.15 mm till 0.25 m. SLF: tip tinned.
Custom made assemblies are available on request for large volume.
Basically, VARTA lithium batteries are safely designed to endure various environmental conditions. The design of the hermetically seal rim and the glass-to-metal welding can give the battery high endurance in various environmental conditions such as variant temperatures, humidity and vibration. Also, the position of lithium against the inner wall of the cell case makes heat dissipated to the outside easier when inside heat is generated. Therefore, there is no concern over safety when the suggested cautions are followed during usage, handling or storage.

However, there might be some possibilities of mishandling or misuse by the customer. Thus, following simulation tests have been performed. The test conditions are based on the procedures of the UL standard tests and Military Standards for environmental and safety testing. The abnormal test is only carried out to check the behavior of the batteries under misuse conditions and make certain the batteries react in a safe manor.
Battery Selection:

In order to ensure optimum battery performance for the primary CR Button, the cylindrical CR High Power and cylindrical High Capacity cells, we suggest consideration of the following design-in requirements. They are the nominal and operating voltage, load current and profile, the duty cycle, temperature requirements and shelf life for the application. These characteristics for each battery type must be evaluated against the design requirements to select the most appropriate product that fulfills these requirements.

Design-in Considerations

**VARTA** Microbattery Primary Lithium Batteries offer lightweight packaged power for a variety of portable electric and electronic equipment. They are suitable as a main or standby power source for memory (RAM) and Real-Time clock (RTC) applications.

The Lithium Batteries are blocked from the power supply by means of a diode to prevent discharge of the battery into the DC supply during shut down.

The voltage drop across D1 should be taken into account as the minimum voltage of the load that has to be maintained under all circumstances.

Blocking diode D2 and D3 prevents the battery from being charged through the power supply. The amount of accumulated reverse current (IR) should be kept around 1% of the cell’s typical capacity during its standby life time. The leakage current of the diodes has to be considered.

Example:
- CR 1/2 AA for 5 years life time
- 1% of 950 mAh = 9.5 mAh = 9500 µAh
- 5 years = 43800 h
- max. reserve current = 9500 µAh/ 43800 h = 0.217 µA

However a maximum of 5µA continuously must not be exceeded. In the absence of a DC supply voltage, the lithium battery supplies the load with the necessary power.

As diodes fail at low current levels by an alloy-effect causing a severe reduction in impedance, an additional safety device must be incorporated.
Printed Circuit Board Mounting

Never solder on the body of the battery directly, use a battery equipped with PC-mount terminals. When using automatic soldering apply 250–270°C within 5 seconds. Make sure that the battery is not suspended or dropped into the soldering bath.

Do not heat above 80 °C to avoid leakage caused by deterioration in the battery’s performance.

UL-Recognition

All VARTA Microbattery Lithium Cells and Batteries are recognized by Underwriters Laboratories Inc. under UL-file number MH 13654 (N).

The cells are marked with the Recognized Component Mark.

Please also pay attention to the Safety Guidelines in Section 5.2.
5.1 SAFETY TESTS

Example Short Circuit

In table 11 the temperature is listed at short circuit at an ambient temperature of 20°C, 40°C and 70°C.

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>CR 1/2 AA</th>
<th>CR 2/3 AA</th>
<th>CR AA</th>
</tr>
</thead>
<tbody>
<tr>
<td>20°C</td>
<td>24°C</td>
<td>28°C</td>
<td>24°C</td>
</tr>
<tr>
<td>40°C</td>
<td>50°C</td>
<td>50°C</td>
<td>47°C</td>
</tr>
<tr>
<td>70°C</td>
<td>80°C</td>
<td>84°C</td>
<td>77°C</td>
</tr>
</tbody>
</table>

Vibration Test

<table>
<thead>
<tr>
<th>Vibration test</th>
<th>Result</th>

</table>
4. TECHNICAL REQUIREMENTS

4.1. Storage before use

<table>
<thead>
<tr>
<th>Duration</th>
<th>Temperature min.</th>
<th>Average</th>
<th>max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Humidity</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4.2. Storage into the device before operating

<table>
<thead>
<tr>
<th>Duration</th>
<th>Temperature min.</th>
<th>Average</th>
<th>max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Humidity</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4.3. Specific tests prior incorporation

4.4. Electric data

Required minimum life time in use

<table>
<thead>
<tr>
<th>Maximum voltage</th>
<th>Nominal capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cut off voltage</td>
<td>Required minimum capacity</td>
</tr>
</tbody>
</table>

Current profile (average current, current pulse strength, pulse duration, pulse rate…)

Others

4.5. climatic data

<table>
<thead>
<tr>
<th>Operating temperature min.</th>
<th>Average</th>
<th>max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Humidity</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Others
4.6. Mechanical data (vibration, drop, bump, shock, …)

Mention the applicable specification and enclose the document if necessary

4.7. Available dimensions: (weight, volume, if possible enclose the user drawing of the prospect)

4.8. Assembly (describe or enclose a drawing)

4.9. Applicable specifications / standards

UL ☐ BS UN ☐ IEC86-4 ☐ Other ☐

4.10. Reliability level – Guarantees

4.11. Labeling and Packaging

VARTA standard labeling and packaging ☐

Customised labeling ☐ (enclose the customer specification) Customised packaging ☐ (enclose the customer specification)

4.12. Attached documents

Samples ☐ Competitor samples ☐ Drawing ☐ Specification of the customer ☐

Copy of specific standards ☐ Samples of connector ☐ Samples of specific components ☐ Other ☐

4.13. Additional information
